---

Melissa, Tom,

Gary Moore needs a quick data summary of the Air Monitoring data that has been collected to date. Something like by Instrument or Monitoring Type (Data Ram Particulate) Maximum reading/Minimum Reading and Average along with the time frame.

He needs this by 10 a.m. this morning, so let me know if this is possible. You can email him or call him directly if you need clarification.

Thanks,

Brad Morgan

Sounds good. I have three additional areaRae files to add this morning and I'll try to get some of the summa sample info in there. We also have some "nuisance odor" data to add. Someone from Weston drove to multiple locations to see if he can smell anything (yes/no) and he ran a PID and Multi-Rae as well. He called that data in last night and I'll look at that when I can.

I'll keep you posted as the morning progresses.

I think we wait so we can allow the Finance section to establish a site ID and we post everything we have by 12ET weather we have it or not. I would add the PDR data from the first day.

Thanks Joe!

Paige, will you run this by John to see if you can get that expedited?

Just reviewed the reporting data set Melissa put together which contains 1 hour averages for the multi/areaRAE data through 4pm yesterday. Looks great from where i'm sitting.

So that's ready to go as soon as you guys give the OK, and then i think we would be on pace to publish again at noon with data from the midnight and 8am collections. But this being the first day i think we should consider that a soft target.

What site # should the Region 6 Scribe projects use? we've got XXX place holders right now, but i'd rather that be filled in before data goes to HQ.

Do we want the PDR particulate data from the first day added to the project?

- if yes, wait to publish or get the VOC data out right away and then publish the PDR data at noon with the rest?

I talked with Eric about this last night, but just wanted to put it out there again in case anyone had problems with it. So Melissa will publish the field reporting project, ERT will subscribe to it and then republish. It's an extra step now, but once we have more projects in play, it will be a good step to have someone else do the combination and then redistribute the whole dataset.

That's all i've got,
